Resolution No. 1416

A District customer who experiences a leak in the customer's private water system, i.e, the water system on the customer's side of the District meter, may apply to the District for a reduction in their water billing relating to water consumed due to a leak. The customer shall fill out a District form certifying that the customer experienced a leak in the customer's private water system, have such form notarized and then submit such completed form to the District. The customer shall also include a copy of the repair bill from a plumber who repaired the leak and/or other itemized bills from a hardware or plumbing supply store for parts, materials and fixture costs actually incurred to repair the leak.

Upon the District's receipt of a completed application for a service billing adjustment due to a leak, the adjustment shall be calculated as follows:

- A. Any adjustment in a water service billing shall be for no more than one billing period.
- B. District customers shall be permitted no more than two leak credits pursuant to this policy during the customer's ownership of the property receiving the water service where the leak occurred.
- C. A customer's actual metered water consumption must exceed the customer's average consumption for the prior years of District water service for the same months that the leak occurred by at least fifty percent (50%) to qualify for a water billing adjustment.
- D. The customer's average billing and actual metered consumption shall be determined from the two prior years District billing records for the same months that the leak occurred; in the event two years of billing history are not available, then an average will be determined by the District based on the limited billing records and/or service billing histories for other similar water accounts. "Excess consumption" shall be calculated by subtracting the customer's average consumption for the subject billing period from the actual metered consumption for the billing period when the leak occurred. The District's wholesale cost of the "excess consumption" shall then be calculated by multiplying the District's cost of acquiring water from the City of Seattle, including any surcharges, by the amount of the "excess consumption." The customer's adjusted service charges for the billing period when the leak occurred shall be the average billing plus the wholesale cost of the "excess consumption." The leak adjustment shall be credited to the customer's service account.
